

Programación AngularJS

1.2*

Introducción

Angularus Sección:

```
ngRoute with
  $ $q
                       pokedex.filters',
  promise
                       pokedex.services
                    1);
  resolves
                     app.config(['$routeProvider', function ($routeProvider) {
ngRepeat
                      $routeProvider
                        .when('/', {
  first, middle,
                       astpleven', yield edex html', controller: 'PokedexController'
Buenas Prácticas
                         templateUrl: 'views/pokedex.html',
ui-router
                         controller: 'PokedexController'
service provider
                         templateUrl: 'views/pokemon.html',
                         controller: 'PokemonController
html5 mode on
```

AngularJS ngRoute

- retornamos un *promise*
- ngRoute se hace cargo del "then"

```
$routeProvider
  .when('/Book/:bookId', {
   templateUrl: 'book.html',
   controller: 'BookController',
   resolve: {
     // function x
     tardar: function($q, $timeout) {
       var delay = $q.defer();
       $timeout(delay.resolve, 1000);
       return delay.promise;
```

```
function MainCtrl (SomeService) {
  var self = this;
  // unresolved
  self.something;
  // resolved asynchronously
  SomeService.doSomething().then(function (response) {
    self.something = response;
 });
angular
  .module('app')
  .controller('MainCtrl', MainCtrl);
```

AngularJS Buenas Prácticas Limpiando lógica al controller

```
function config ($routeProvider) {
    $routeProvider
    .when('/', {
        templateUrl: 'views/main.html',
        resolve: {
            doSomething: function (SomeService) {
               return SomeService.doSomething();
            }
        }
    });
}
angular
.module('app')
.config(config);
```

AngularJS Algunas Buenas Prácticas

- En \$scope sólo funciones y variables que utilize tu plantilla.
- No utilizar "\$" para prefijos de variables, propiedades o metodos propios
- 3. \$routeScope para eventos, **NO** para almacenar Datos. (ocupar servicios)
- 4. No pasar servicios a la vista
- 5. No ocupar directivas compartidas

AngularJS Eventos y Resolve

EX_13

Uso de resolve

Ventana 1 Ventana 2

ejemplos: resolve/route/tempscript

AngularJS ngRepeat

first, middle, last, index.

```
<div ng-init="friends = [</pre>
  {name:'John', age:25, gender:'boy'},
  {name:'Jessie', age:30, gender:'girl'},
  {name:'Johanna', age:28, gender:'girl'},
  {name:'Joy', age:15, gender:'girl'},
  {name:'Mary', age:28, gender:'girl'},
  {name: 'Peter', age:95, gender: 'boy'},
  {name: 'Sebastian', age:50, gender: 'boy'},
  {name: 'Erika', age:27, gender: 'girl'},
  {name: 'Patrick', age:40, gender: 'boy'},
  {name: 'Samantha', age:60, gender:'girl'}
]">
  Arreglo: {{friends.length}} length.:
  <span ng-repeat="friend in friends">
       <span ng-show="$first">::::INICIO::::</span>
       [{{$index + 1}}] {{friend.name}}, {{friend.age}} años.
       <span ng-show="$last">::::FIN::::</span>
   </span>
   ng-if="results.length == 0">
     <strong>Sin resultados...</strong>
   </div>
```

AngularJS Eventos

EX_13_2

Arreglo: 10 length:

- ::::INICIO::::
- [1] John, 25 años.
- [2] Jessie, 30 años.
- [3] Johanna, 28 años.
- [4] Joy, 15 años.
- [5] Mary, 28 años.
- · [6] Peter, 95 años.
- [7] Sebastian, 50 años.
- [8] Erika, 27 años.
- [9] Patrick, 40 años.
- [10] Samantha, 60 años.
- ::::FIN::::

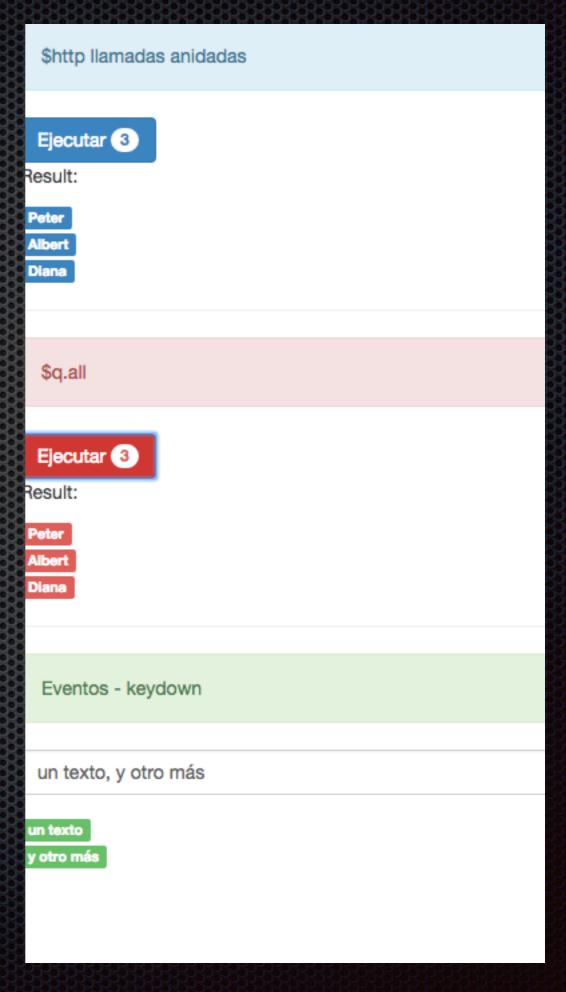

AngularJS \$http => resolve

Sin Resolve	Con Resolve
Numero	Titulo
12259	TROUBLESHOOT ANGULAR MATERIAL BREAKAGE WITH "DO NOT WRITE @-BOU
12248	SYNCHRONOUS CLASSES IN NGANIMATE
12265	PASS BY VALUE NOT WORKING IN SELECT
12260	PARENT SCOPE NOT INHERITED WITHIN DIRECTIVE USING NGREPEAT AND REP
12255	ORIGIN NOT BEING ADDED TO REQUEST HEADERS IN SOME CIRCUMSTANCES
12222	OPTIONALY FILTER ARGUMENTS OF XSS-VULNERABILITY-PRONE JQLITE METH
12266	NGANIMATE MESSING WITH VALIDATION CLASSES
12249	NG-FORM CANNOT SHOW MESSAGE & REMOVE ITEM FROM ARRY
12233	NESTED HEADERS ARE NOT SERIALIZED CORRECTLY
12218	MOVE SCE VALIDATION FROM COMPILE/ROUTE/
12271	LEAVE ANIMATION CALLBACK OVERRIDDEN BY NEXT ANIMATION
12263	INPUT VALIDITY REFLECTED ON FORM AFTER '\$REMOVECONTROL'
12241	INFINITE DIGEST ON LOCATION CHANGE ON IOS 9 BETA 2.
12245	FIXES TO BODY ELEMENT ANIMATION

AngularJS \$http distintos estilos

AngularJS ui-router

- Librería externa al core, posiblemente incorporada al core en el futuro
- Diferencia con ngRoute?
 - •ui-router tiene vistas anidada
 - •ui-router tiene múltiples vistas
 - ui-router tiene ui-sref en donde podemos manejar de mejor forma las rutas para proyectos grandes
 - •ui-router se enfoca en estados y ngroute en URLs
 - Capacidad de hacer rutas dínamicas

AngularJS ui-router

```
var routerApp = angular.module('routerApp', ['ui.router']);
routerApp.config(function($stateProvider, $urlRouterProvider) {
   $urlRouterProvider.otherwise('/home');
   $stateProvider
      .state('home', {
          url: '/home',
          templateUrl: 'partial-home.html'
      })
      // OTRO =============
       .state('about', {
      });
});
```

AngularJS ui-router - nested views

```
$stateProvider
.state('home', {
    url: '/home',
    templateUrl: 'partial-home.html'
})
.state('home.list', {
    url: '/list',
    templateUrl: 'partial-home-list.html'
})
.state('home.paragraph', {
    url: '/paragraph',
    template: 'otra más.'
})
```

AngularJS ui-router ejemplos

AngularUI NAV

Inicio

Nosotros

Pagina inicio

Esta página muestra vistas anidadas.

Lista

Parrafo

Texto simple en home.paragraph.["Gato", "Oso", "Perro"]

AngularJS HTML5 Mode True

```
.config(function ($routeProvider, $locationProvider) {
  $routeProvider
    .when('/', {
      templateUrl: 'views/main.html',
      controller: 'MainCtrl'
    .when('/about', {
      templateUrl: 'views/about.html',
      controller: 'AboutCtrl'
    })
    .otherwise({
      redirectTo: '/'
    });
    $locationProvider.html5Mode(true);
});
```

AngularJS PHP Server example config

```
RewriteEngine On 
Options FollowSymLinks
```

```
RewriteBase /
```

```
RewriteCond %{REQUEST_FILENAME} !-f
RewriteCond %{REQUEST_FILENAME} !-d
RewriteRule ^(.*)$ /#/$1 [L]
```

AngularJS Utilizando Links

```
<base href="/sub_carpeta/" />
<base href="/" />
<a href="#/home/contacto">link</a> to <a href="/home/contacto">link</a> <a href="/home/contacto">link</a> to <a href="/home/otro">link</a>
```

AngularJS Service->Provider

- El servicio más sofisticado
- Posibilidad de crear funciones y variables
- Similar a factory
- Al igual que constant puede inyectarse en la fase "config"
- No es posible inyectarlo en run, controllers, etc.
- Se puede inyectar servicios en \$get
- Un ejemplo es \$routeProvider o \$stateProvider

AngularJS Service->Provider

```
var app = angular.module('app', []);
app.provider('usuario', function () {
  var _login;
  return {
    setLogin: function (login) {
        _login = login;
    },
    $get: function ($http, ...) {
        return {
            isOk: _login ? true:false,
            getTexto: function(){
                return "Mi Funcion"
});
app.config(function (usuarioProvider) {
  usuarioProvider.setLogin("mbarria");
});
app.controller('ctrl', function (usuario) {
  console.log(usuario.is0k)
  console.log(usuario.getTexto())
});
```

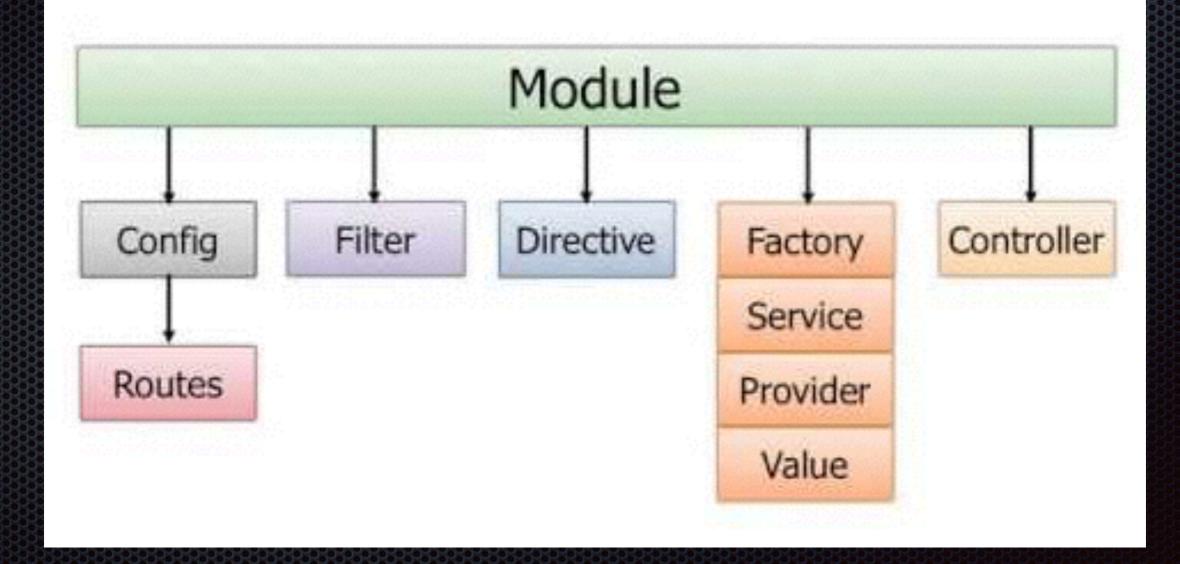

AngularJS Lluvia de conceptos

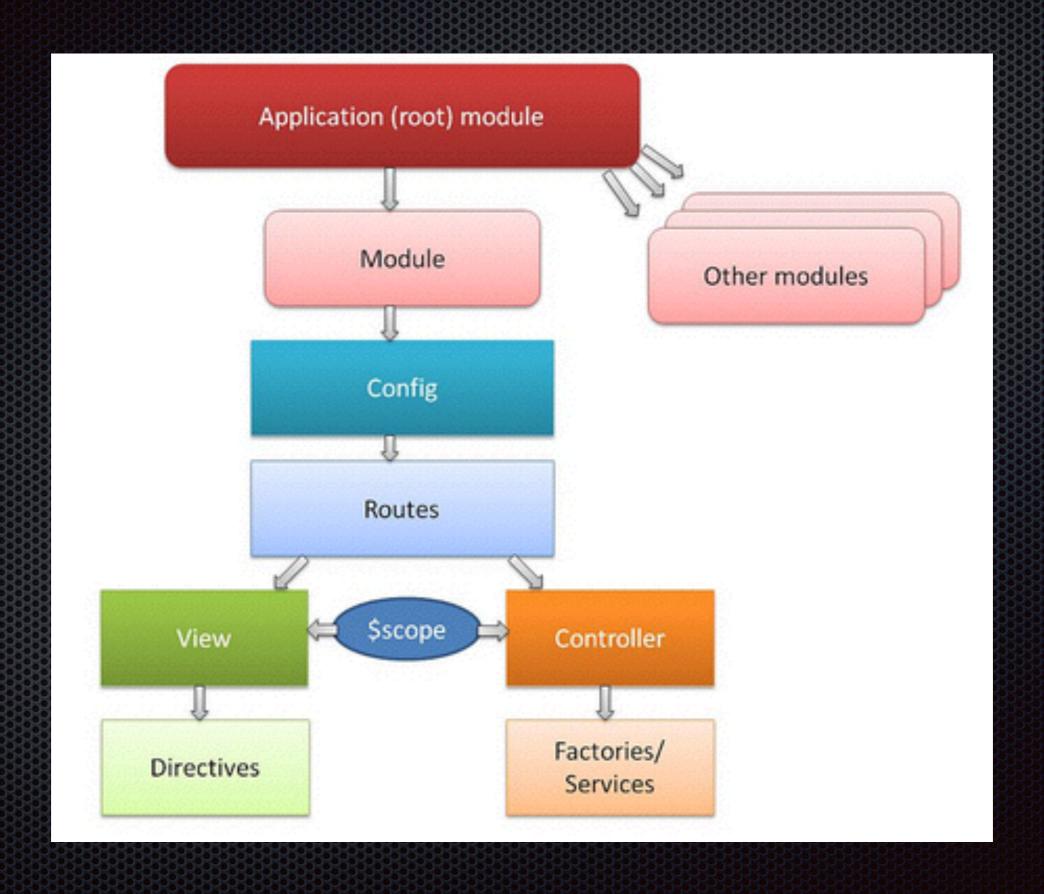

AngularJS Lluvia de conceptos

Modules are Containers

<html ng-app="moduleName">

AngularJS Lluvia de conceptos

AngularJS Directivas

Key AngularJS Directives

Templates

- ng-disabled
- ng-cloak
- ng-hide
- ng-if
- ng-repeat
- ng-show
- ng-switch
- · ng-view

Application

- ng-app
- ng-controller

Data Binding

- ng-bind
- ng-href
- ng-init
- ng-model
- ng-src
- ng-style

Forms

- · ng-maxlength
- · ng-minlength
- ng-pattern
- · ng-required
- · ng-submit

Behavior

- ng-blur
- ng-change
- ng-checked
- · ng-click
- ng-key*
- ng-mouse*

AngularJS Directivas Scope

```
angular.module('moduleName')
    .directive('myDirective', function () {
    return {
        restrict: 'EA', //E = element, A = attribute, C = class, M = comment
        scope: {
            //@ reads the attribute string value,
            //= provides two-way binding,
            //& works with functions
            title: '@'
        template: '<div>{{ myVal }}</div>',
        templateUrl: 'mytemplate.html',
        controller: controller,
        link: function ($scope, element, attrs) { } //DOM manipulation
```

TEXTO

=: DataBinding

&: FUNCTION

AngularJS Directivas Scope compartido

```
var app = angular.module('myModule', []);
app.controller('Controller', ['$scope', function ($scope) {
    $scope.customer = {
        name: 'David',
        street: '1234 Anywhere St.'
};
}]);
Scope is inherited
app.directive('sharedScope', function () {
    return {
        template: 'Name: {{customer.name}} Street: {{customer.street}}'
    };
});
```

"scope: es buena práctica no compartir el scope, más bien pasarlo a través de atributos (para reutilizar)"

AngularJS Directivas link(manejo del DOM)

```
angular.module('directivesModule')
   .directive('domDirective', function () {
    return {
        restrict: 'A',
        link: function ($scope, element, attrs) {
            element.bind('click', function () {
                element.html('You clicked me!');
        });
        element.bind('mouseenter', function () {
            element.css('background-color', 'yellow');
        });
        element.bind('mouseleave', function () {
            element.css('background-color', 'white');
        });
    }
};
```

"element: es como si tuviéramos con jquery el elemento \$('#id')"

"**attrs**: acceso a todos los atributos del elemento"

<div dom-directive>Click Me!</div>

AngularJS Directivas con controlador propio

```
function cajaBusqueda() {
  return {
    restrict: 'E',
    transclude: false,
    scope: { textoABuscar: "=" },
    controller: function($scope) {
      $scope.textoLocal = "";
      $scope.borrarBusqueda = function() {
        $scope.textoABuscar = "";
        $scope.textoLocal = "";
      $scope.buscar = function() {
        $scope.textoABuscar = $scope.textoLocal;
    },
    replace: true,
    template:
      "<form>" +
      "<div>" +
        "<input ng-model='textoLocal' type='text' />" +
      "</div>" +
      "<div>" +
        "<button ng-click='borrarBusqueda()'>Borrar</button>" +
        "<button ng-click='buscar()'>Buscar</button>" +
      "</div>"
      "</form>"
```

"transclude: para preservar código del contenido"

AngularJS LOGIN

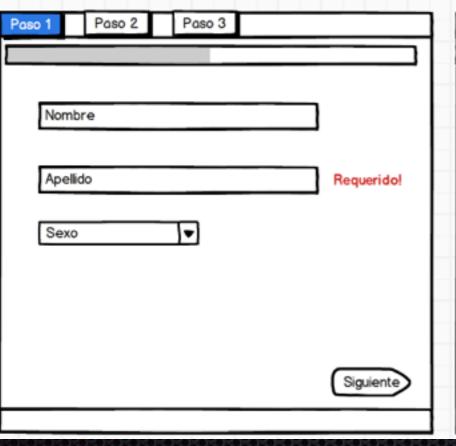

```
angular.module('Authentication', []);
angular.module('Home', []);

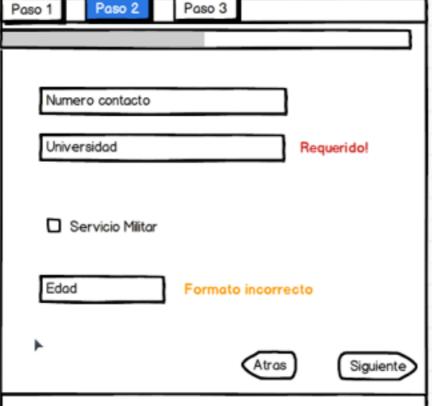

angular.module('BasicHttpAuthExample', [
    'Authentication',
    'Home',
    'ngRoute',
    'ngCookies'
])
```

AngularJS Tarea - Wizard

- Utilizar servicio para las sub-vistas
- Validaciones
- Siguiente Atrás
- 1 vista -> 3 sub-vistas -> Controllers
- Utilizar ui-route (ex_18)
- Extra: Utilizar directiva para mostrar el último cuadro
- Progressbar -> Bootstrap

<pre>app.factory("user",function(){</pre>
return {};
<pre>});</pre>
